North Carolina forests accounted for a total of 872,501 thousand cubic feet (MCF) of timber products while the forest products industry produced a total of 859,577 MCF within the State.

This resource update contains the findings of a survey conducted on a sample of all primary wood-using mills in North Carolina. It complements the Forest Inventory and Analysis (FIA) annual inventory of volume and removals. The survey was conducted to determine the amount and source of wood receipts and annual timber product imports/exports. Only primary wood-using mills were surveyed. Primary mills are those that process roundwood in log or bolt form or as chipped roundwood. Examples of industrial roundwood products are saw logs, pulpwood, veneer logs, poles, and logs used for composite board products. Mills producing products from residues generated at primary and secondary processors were not surveyed. Data used in this update were accessed from the FIA Timber Product Output database (see back page).

North Carolina had a total production of 872,501 MCF in 2020.

There are about 258 primary wood processing mills accounting for production in the State.

Statewide roundwood production (% of total) by product
