Whispers of Pine trees is a farm owned and operated by it’s driving interest associated with 30 minutes southwest of Raleigh, NC. We specialize in milling and slabbing oversized (up to 72" long) logs. We currently mill timber from our regional forest patch of old growth white oak, along with other local trees. We work with a number of individuals, companies and universities that are interested in preserving and using our timber product in a variety of ways. As such we are committed to performing our role as stewards of the land and to providing a sustainable source of timber and wood products.

Safety Notes
I worked on the pisted and found a tick crawling on my arm, so I’m in for a little tick season this year. Urban & Community Forests
